

COVID-19

What is it?

Coronavirus Disease, or COVID-19, is a respiratory virus that hadn't been identified in humans until 2019.

Coronaviruses cause illnesses ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS) and Severe Acute Respiratory Syndrome (SARS).

Symptoms

Fever

Cough

Shortness of breath

Breathing difficulties

As of 9 March, the risk of infection from the virus in Yukon—and throughout Canada—remains low.

Travellers returning from abroad are being asked to monitor their health for fever, cough, and difficulty breathing for 14 days after returning to the country and to notify the public health authority in their province or territory if they notice these symptoms.

Air North's safety department is monitoring the situation and will provide updates as necessary.

Preventing Infection

- Wash your hands often with soap and water for at least 20 seconds. If you don't have soap or water, use an alcohol-based sanitizer that contains at least 60% alcohol.

- Avoid touching your eyes, nose, or mouth with unwashed hands.

- Avoid close contact with people who are sick.

- Clean and disinfect objects and surfaces that are touched a lot.

- Cover your mouth and nose with a tissue when you cough or sneeze, then throw the tissue immediately into the trash or cover your mouth and nose with your inner elbow when you cough or sneeze.

- Stay home when you are sick.
